UTILITYAPI

UNLEASHING THE CLEAN ENERGY REVOLUTION *FOR ALL*.

UTILITY DATA EXCHANGE (UDX)

UtilityAPI's UDX enables utilities to comply with Green Button Connect My Data, streamline customer program implementation, and aggregate commercial customer meter data. The utility is at the center of automating the digital transfer of data from customers to approved third-party service providers.

GREEN BUTTON CONNECT

UDX is the world's only off-the-shelf Green Button Alliance (GBA)-certified data exchange platform for achieving Green Button Connect compliance. UDX's standard features include:

- A utility white-labeled customer experience
- A third-party dashboard and standard APIs for requesting customer data
- Customer, third-party, and utility initiated data-sharing workflows
- An administrative backend for reviewing third-party activities, exporting custom reports, and providing program vendors access

PROGRAM IMPLEMENTATION

Improve your customer program implementation by leveraging UDX's admin and user features:

- **Simplify contract negotiations.** Eliminate data access contracts by providing vendors with unique admin privileges based on program goals.
- **Streamline program enrollment**. Enhance rebate program enrollment and participation with UDX APIs.
- **Unlock federal program funding.** Enable customer participation in IRA electrification programs, VPPs, and real-time rates.
